Letter of Recommendation

Piotr Andrzej Pospiech

I have had the pleasure of being Piotr's manager at Geni - the tech arm of Firtal which is a subsidiary of Matas A/S.

Piotr worked for us as Student Developer whilst completing his education. He joined in September, 2021, until February, 2023. Piotr did splendid work at Geni. He started out evaluating Bubble.io and a built-from-scratch app as alternatives to Retool.com.

Next task was building the initial prototype of an RMA system to handle refunds and resends of orders hosted at Vercel.com. This system is now in production as a Retool app, but it started with Piotr's prototype made with Vue.js

The crown jewel of Piotr's contributions came as he joined our Shopware project. We launched [Made4men.dk](https://www.made4men.dk) in March 2022 and ever since he has contributed - 11 months in total. Among other things, Piotr completed the "Tjek min ordre"-page and styled our Clerk-based product feeds/sliders. He was instrumental in providing technical feedback to the external bureau who - at the time - developed our frontend/storefront. He also helped style and animate the search results coming from Algolia. Later Piotr took over as our sole frontend developer for a period of two months while we looked for a fulltime in-house frontender. A gap he bridged well. Piotr can build shopping experiences for Shopware 6 using backend+frontend Vue.js and Symfony (PHP).

We thank Piotr for his many contributions and wish him our very best in his next (full time) position.

Dan Kristensen Hørlyck
